			(3 Hours)	[Total Marks: 80]	
NB:	1)	Question No. 1 Co	ompulsory.		300
	2)		e from the remaining questi	ons.	
	3)	Assume suitable	data wherever necessary.		
Q.1	Answe	r any FOUR	2,22		
~-	a)	•	types of network addresses.	30,300,2,30,000	5
	b)	Compare TCP and			55
	c)	•	s of UTP cables. How is noise	e interference	356 256
	d)		een synchronous and statisti	cal TDM.	5
	e)	_	ng? List advantages and disa		55
Q.2.a	-	n Different ARQ tec vith justification.	hniques. Also explain the ma	aximum window size for	10
Q.2.b	What is ketch to Primar 1. I with 2. I 3.S The 4. A ack 5. S 6. S	s piggybacking? Given the appropriate HD by station 'A' and two Primary station A with Secondary station Both the stations B tation A sends a post third frame is lost Assuming Selective knowledgement to Station B resends the Station A now polls ponse. A sends three	and C, send positive ackowledge of the command to B and B seed the command to B and B seed the command to B and B seed the command of the com	scenario involving C. Response mode link ledgements to A. ends 4 data frames. s negative ve acknowledgement. onds with ready ends positive	10
Q.3.a	and ne not be	twork address for ing used and use d		=	10
Q.3.b	What i advant switch size of	s meant by 'blockir ages of multi stage ing. (1). Sketch the n=5, k=2. What is r the same specific	8.14.13 3). 144.62.12.9 ng' in circuit switching netwo e space division switching over three stage Space Division s the condition required to materials cations sketch three stage TS	er single stage witch with N=15, group ake it non blocking?	10
Q.4. a			el and explain function of ea end to end reliability (2). lin	·	10

69938 Page 1 of 2

10

10

20

- Q.4. b Define the utilization or efficiency of the line and derive the expression for stop and wait flow control. Calculate the maximum link utilization for the following cases:-
 - 1. Stop and wait flow control
 - 2. Sliding window flow control with window sizes of 4 and 7.5

Link specifications:

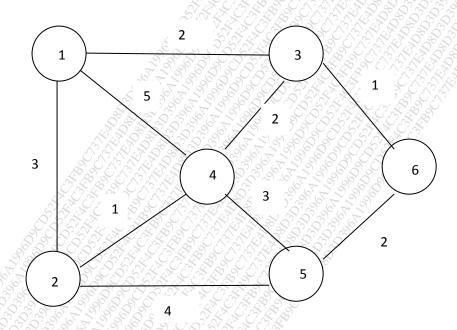

Frame length= 1000 bits/frame

Velocity of propagation = 2 X 10⁸ m/sec

Link distance= 20km

Data rate= 20 Mbps

Q.5.a Apply Dijkstra's and Bellman Ford algorithm to the given network and find the least cost path between source node 1 to all other nodes.

- Q.5.b Draw and Explain TCP header format with the help of a neat diagram.
- Q.6. Write short note on:(Any TWO)
 - Congestion control techniques
 - b) ADSL

a)

- c) Compare IPv4 and IPv6
- d) CSMA/CD

(Time: 3 Hours)

N.B: (1) Question No.1 is compulsory.

[Total Marks: 80]

	Solves any three out of remaining question. Assume suitable data if necessary.	
Q.1	Solve any Four	
	a. State the phases of new product development.	05
	b. What are the metrics in software designing?	05
	c. What is shielding? Explain with neat diagram.	05
	d. State clearly the limitations and advantages of the Spiral model in EPD.	05
	e. What is the difference between active and passive component.	05
Q.2	a. Design the front panel of a function generator by taking care of ergonomics and aesthetic design considerations.	10
	b. Explain the concept of coupling and cohesion.	10
Q.3	a. Explain the V Cycle model with all the steps and proper justification.	10
	 b. What is the need of PCB testing? Explain the following methods of PCB testing in details:- i) In-circuit testing ii) Functional testing iii) Boundary scan testing iv) Complex board testing 	10
Q.4	a. What is the role of characterization in case of debugging and troubleshooting?	10
	b. Explain how mapping of functions to hardware is done in architectural design.	10
Q.5	a. Write the checklist for developing effective Manuals for the international Market.	10
	b. How to handle EMI/EMC issues in an Electronic Product?	05
	c. Explain the need of ESD Protection in PCB Designing.	05
	Write short note on (any four)	
Q.6	a. Different grounding methodologies	05
3000	b. Need of Prototyping	05
10 P 70;	c. Black box testing and white box testing	05
CENTRAL OF CO	d. Different types of termination methods used in PCB designing	05
SY A	e. Different software models with advantage and disadvantage	05

67456

Time: 5 mis	LKS; OU
N.B. 1) Question number ONE is compulsory. 2) Attempt any THREE questions from remaining questions. 3) All questions carry equal marks.	
 a) Compare Microcell, Metrocell, Picocell, Femtocell and WiFi in terms of cell radius, povin watts and number of users. b) Differentiate between CDMA, TDMA and FDMA c) Explain services and features of GSM e) Explain mobility and resource management 	ver lev 5 5 5 5
 Q2 a) Consider a cellular system in which the total available voice channels to handle traffic are 480. The area of each cell is 5 sq.km. and the total coverage area of the system is 3000 sq.km. 1) For the cluster size of 7, find the no. of channels per cell, no. of clusters, and the system capacity. 2) For the cluster size of 4, repeat the above calculations. 3) Comment on result. 	10
b) Explain different channel assignment strategies in cellular system.	10
Q3 a) What is Huygen's principle of diffraction? Explain Knife –edge Diffraction Model. b) Explain types of Small scale Fading based on multipath time delay spread.	10 10
Q4 a) Draw a well labelled diagram and explain in detail the architecture of GSM. b) Explain the terms related to GSM 1. Diagonal Interleaving 2. Ciphering 3. SIM 4. IMSI Number 5. SMS	10 10
Q5 a) Explain IS 95 forward and reverse channels.	10
b) Explain UMTS network architecture in detail with interfaces	10
Q6 Write short notes on following a) Factors influencing Small Scale fading b) DSSS and FHSS c) Erlang B and Erlang C system d) CDMA 2000	20

67616

Time: 5 mis	1,496
N.B.	
1) Question number ONE is compulsory.	
2) Attempt any THREE questions from remaining questions.	
3) All questions carry equal marks.	2000
	1000 B
Q1] Answer any four questions	
a) Differentiate between bilinear ZT and impulse invariant methodb) Compute 4-point DFT of a causal four sample sequence given by,	5
X(n)= { j, 0, j, 1 }c) Explain the effect of quantization in computation of DFT	5 5
d) Verify Parseval's theorem for sequence $x(n) = (\frac{1}{2})^n u(n)$. assume N=4.	3
e) Differentiate between DSP processor and microprocessor	5
Q2] a) Find DFT of the following sequence using DIT FFT algorithm.	10
$x(n) = \{ -1 -1 \ 2 \ 0 \ 2 \ 0 \ \}$ and sketch the magnitude and phase response.	
b) Let x be a finite sequence with DFT $X = \text{DFT}[x] = [0, 1+j, 1, 1-j]$ Using the properties of the DFT determine the DFT's of the following: i) $y[n] = e^{j(\pi/2)n} x(n)$ ii) $y[n] = \cos(\pi/2)n x(n)$ iii) $y[n] = x[(n-1)_4]$ iv) $y[n] = [0, 0, 1, 0] \circledast x[n]$ with \circledast denoting circular convolution	10
Q3] a)Design a Butterworth digital IIR low pass filter using Bilinear transformation by taking	
T=0.5 second, to satisfy the following specifications.	
$0.707 \le H(e^{jw} \le 1.0 : 0 \le w \le 0.45\pi$	
$ H(e^{jw} \le 0.2 \ : \ 0.65\pi \le w \le \pi$	10
b) Given that,	
$H(s) = s^3/((s+1)(s^2+s+1)).$	
Find H (Z) using Bilinear Transformation method, for T=1	10
Q4] a) Explain special features of TMS 320 c67XX DSP processor.	10
b) Consider the LTI system governed by the equation, y(n)+0.8301y(n-1)+0.7348y(n-2)=	x(n-2)
Discuss the effect of coefficient quantization on pole locations, when the coefficients are quantized by (i) 3 bits by truncation and (ii) 4 bits by truncation	10
\$2 U. 67 67 67 8 8 67 67 67	

Paper / Subject Code: 37205 / DIGITAL SIGNAL PROCESSING AND PROCESSORS

QɔJ	(25) a) Design a linear phase FIR low pass filter using rectangular window by taking 7 samples			
	of window sequence and with cutoff frequency wc= 0.2π rad/sample.	10		
		12 12 15 15 15 15 15 15 15 15 15 15 15 15 15		
	b) Explain with neat diagram application of DSP processor in biomedical signal processing	10		
		2000		

Q6] Write short notes on (any two)

³ 2(

- a) Addressing modes of DSP processor? Where they are used.
- b) Frequency transformation in digital domain
- c) DMA controller, Memory organization of TMS320C6713

Paper / Subject Code: 88964 / Signals & Systems

(3 Hrs) Total Marks: 80

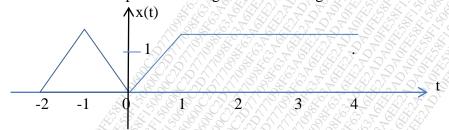

NOTE: 1) Question number 1 is compulsory.

- 2) Attempt any three questions from the remaining five questions.
- 3) Assume suitable data wherever necessary.
- Q.1 a) How will you obtain z-transform of the D.T signal x(nT), from laplace transform of sampled (5) version of x(t), using $z = e^{st}$
 - b) Check whether the following system is static/dynamic, linear/non-linear, shift variant/shift (5) invariant and casusal/non-causal

$$i)y(t) = x(t) \cos 100\pi t$$

$$ii) y(n) = n.x(n)$$

- c) Determine DTFS for the sequence $x(n) = 4\cos\frac{\pi n}{2}$ (5)
- d) Prove that energy of a power signal is infinite and power of an energy signal is zero. (5)
- Q.2 a) Find the even and odd parts of the signal shown in figure (5)

b) Verify periodicity of the following continuous time signals, if periodic, find the (5) fundamental period.

i)x(t) =
$$2\cos(\frac{t}{4})$$

ii) x(n) = $2\cos(\frac{2\pi n}{3}) + 3\cos(\frac{2\pi n}{7})$

c) The analog signal x(t) is given below: $x(t) = 5\cos 50\pi t + 2\sin 200\pi t - 2\cos 100\pi t$ (10)

Determine the minimum sampling frequency and the sampled version of analog signal at this frequency. Sketch the waveform and show the sampling points.

Q.3 a) The transfer function of discrete time causal system is given by, (10)

$$H(Z) = \frac{1 - Z^{-1}}{1 - 0.2Z^{-1} - 0.15Z^{-2}}$$

Draw cascade and parallel realization.

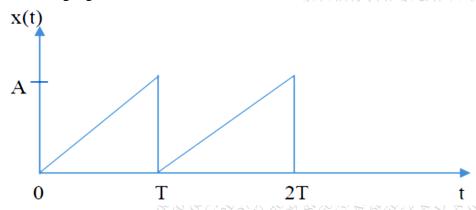

b) Perform the following convolution operation of two functions in time domain. (10) $x_1(t) = e^{-4t} u(t) \quad x_2(t) = u(t-4)$

Q.4 a) Using the Laplace Transform determine the complete response of the system described by (10) the equation:

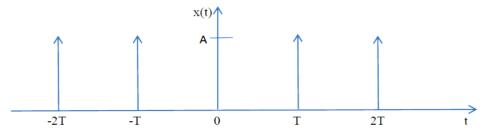

$$\frac{d^2y(t)}{dt^2} + 5\frac{dy(t)}{dt} + 4y(t) = \frac{dx(t)}{dt}$$

Assume that initial conditions of the system are y(0) = 0 and y'(0) = 1 at input $x(t) = e^{-2t} u(t)$

b) Obtain the exponential form of the Fourier series representation of the signal shown in (10) following signal:

Q.5 a) Determine the FT of the periodic impulse function shown in figure. (10)

- b) A causal LTI system has a transfer function $H(Z) = H_1(Z)$. $H_2(Z)$, where $H_1(Z) = \frac{1 0.2Z^{-1}}{1 + 0.5Z^{-1}}$, $H_2(Z) = \frac{1}{1 + 0.3Z^{-1}}$ (10)
 - i)If the system is stable, give it's ROC
 - ii) Find the impulse response of the system
 - iii) Find the system response if $X(Z) = \sqrt{\frac{1}{1 0.2Z^{-1}}}$
 - iv) Draw the pole-zero diagram.
- Q.6 a) Prove Duality property of fourier transform. (05)
 - b) Define the ESD and PSD. What is the relation of ESD and PSD with auto correlation? (05)
 - c) Determine the impulse response for the cascade of two LTI systems having impulse (05) response $h_1(n) = (\frac{1}{3})^n$ u(n) and $h_2(n) = (\frac{1}{4})^n$ u(n)
 - d) Find initial and final value of signal. (05) $X(S) = \frac{s+1}{s(s+2)}$

		(3 Hours) [Total Mark	s: 80]
N.]	(1) Question No. 1 is Compulsory . (2) Attempt any three questions out of remaining five .	
		(3) Each question carries 20 marks and sub-question carry equal marks.(4) Assume suitable data if required.	
1.		Solve any 4 of the following;	(20)
	(a) (b)	Draw and explain AND gate using pass transistor logic	(5) (5)
	, ,	Implement Y= (A+B.C) using dynamic CMOS logic.	
	(c)	Explain low power design consideration	(5)
	(d)	Implement half adder circuit using static CMOS.	(5)
	(e)	Draw schematic for 6T SRAM cell and explain its stability criteria	(5)
2.	(a)	Explain concept of precharge and evolution in dynamic CMOS	(10)
2.	(b)	Define scaling? Explain various types of scaling in detail	(10)
3.	(a)	Compare Ripple carry adder and carry-look-ahead adder. Explain 4 bit CLA adder implementation.	(10)
	(b)	Explain various techniques of clock generation. Discuss 'H' Tree clock distribution	(10)
4.	(a)	Consider a CMOS inverter circuit with following parameter	(10)
		$V_{\text{Ton}} = 0.6 \text{ V}, V_{\text{Top}} = -0.7 \text{ V},$	
		$\mu_n \text{Cox} = 60 \mu \text{A/V}^2$, $(\text{W/L})_n = 8$ $\mu_p \text{Cox} = 25 \mu \text{A/V}^2$, $(\text{W/L})_p = 12$	
	8	Calculate noise margins and switching threshold of the inverter. The power	
	200	supply voltage $V_{DD} = 3.3V$	(10)
205	(b)	Implement 4:1 MUX using pass transmission logic. Explain advantages of using transmission gates.	(10)
5	(a)	Explain Barrel shifter in brief.	(10)
		Draw JK flip flop using CMOS and explain its operation.	(10)
6.	Wri	te short notes on any two of the following:	(20)
	(a)	ESD protection techniques	
70	(b)	Interconnect scaling and crosstalk	
200	(c)	Sense Amplifier	
	(d)	NAND based ROM array.	

68442 Page 1 of 1

(3 Hours) [Total Marks: 80] (1) Question 1 is compulsory. (2) Attempt any **three** from the remaining questions. (3) Draw neat diagrams wherever necessary. Q1. Answer the following questions: Any 4 a) Justify the need for brown-out detection circuit in embedded systems and the mechanism of implementing the same. (5)**b)** What is a Dead Lock State for an embedded system? Give the Types of Deadlock (5)c) Compare the use of Macros and Functions in terms of Speed and Memory space. (5) d) What are interrupts and explain the factors that contribute to interrupt response time in a (5) e) Draw the Data Flow Graph for the following (5) **Q2** (a) Design a Coffee vending machine, for this develop. (20)• FSM which describes the functioning of the system, • Requirements /Specifications Hardware block diagram List of components with justification Design challenges and suggest solutions Q3 (a) What is an inter process communication? Explain the various IPCs mechanisms used in MicroCOS/II. (12)Q3 (b) Find whether the following Task Set is RMA schedulable Ti(ei,pi): T1: (1,4), T2(2,6) T3(3,8) (8) Compare RMA and EDF Scheduling Algorithms

69004

Paper / Subject Code: 88961 / Embedded System and RTOS

Q4(a)	Compare black box and white box testing. Explain any one On Chip Debugg	ging		
	Technique	(10)		
Q4 (b	Explain CAN bus Protocol in detail w.r.t features, Applications etc.	(10)		
Q5 (a) Explain in Detail Design metrics for an embedded system. Which are the tig	ghtly		
	constrained metrics, comment	(10)		
Q5(b)) What is a task and various states that a task can lie in for an embedded environment.			
	Explain Context Switching Process.	(10)		
Q 6. V	Write a short note on any 2	(20)		
	a) Watch Dog Timer			
	b) Sensors & Actuators used in Embedded System			
	c) Priority Ceiling Protocol			
	d) I2C Communication Protocol.			
	e) OSTaskCreate(),OSSemCreate(),OSFlagPost(),OSInit()			

T	ime: 3 Hours	Max Marks: 80	
N.B: 1) Question no. 1 is comp	ulsory.	2.2.2.2.2.2.2.2.2.2.2.2.2.2.2.2.2.2.2.	25.50
2) Attempt any three out of	f the remaining five questions		300
3) Use suitable data, where	ever necessary.		200
Q 1: Attempt any four questions	from the following:		(20
Q 1. Attempt any four questions	s from the following.		7 7 6
a. Explain the function of §	given CPU registers used in Vo MAR, MDR, IR, PC, SP	n Neumann model:	
b. Differentiate between DR	AM and SRAM		
c. Why does a superscalar p	rocessor use dynamic branch pr	rediction? Justify.	
d. Define Micro-operation, I	Microinstruction, Micro-progra	m, Micro-code.	8
•	* * * * * * * * * * * * * * * * * * * *	on a 4-processor machine and 80% e speedup by applying Amdahl's law.	
	and $= +23$	m and multiply the following:	
Multiplie	$\mathbf{r} = -6$		(10
Q2 (b) Explain cache memory n	napping techniques with an exa	mple	(10)
00() D			
Q3(a) Demonstrate the advantage	ges of pipelining and explain va	irious types of pipeline hazards	
and their solutions. G	ive examples		(10)
Q3(b) Explain in detail hardwire	ed control. Discuss any one me	thod to implement it.	(10
	nt algorithm also find out page 13 FIFO and LRU method. Consists 5 3 3 1 2 4 8 5 4		(10
Q 4(b) Explain in detail, differe	nt types of buses and methods of	of arbitration.	(10
Q 5(a) Explain in detail, charact	teristics of RISC and CISC		(10
Q 5(b)Explain Flynn's classifica	ation for parallel processing sys	stems.	(10)
Q 6. Write short notes on (any f	our)		(20)
a. IEEE 754 formatb. PCI bus Architecturec. NUMAd. Cluster computinge. Control sequence for the or	execution of SUB R1, (R2) inst	ruction.	
690/1	Page 1 of 1
