QP Code: 720901

[Total Marks:80, About 15. (3 Hours) (1) Question no. 1 is compulsory Attempt any three questions out of remaining five questions. 1. (a) With example explain Failure, Defect and Error (b) Explain STLC 5 (c) Explain software quality metrics 5 (d) Issues in Object Oriented Testing 5 2. (a) What is Verification and Validation? What is it's need? (a) What is Verification and Validation? What is it's need?
(b) A program reads three numbers n1, n2, n3, in the range -100 to 100 and prints the 10 10 smallest number. Design test cases for this program using equivalence class testing technique. 3. (a) Draw control flow graph and find cyclomatic complexity for the following PDL 10 if(c1 or c2 and c3) s1; else s2; while(c4) s3; s4; do s5; while (c5); (b) Design test cases to find maximum of 4 nos. 10 4. (a) Explain static Data Flow Testing with example 10 (b) Explain different types of Arcremental Integration Testing Methods 10 5. (a) Explain entry and exit or teria for Alpha and Beta Testing. How Alpha testing differs 10 from Beta testing. (b) T contains 90 tests of which 20 are modification-revealing for P and P' and M selects 10 12 of these 20 tests, then calculate the inclusiveness of M relative to P, P', and T. 6. (a) Explain structure of Testing Group 5 (b) Explain different size metrics 5 (c) What is test suite? Why it grows. 5 (d) Elaborate on SQA Models in brief 5

(3 Hours)

[Total Marks: 80]

N.B. :

1. Question No. 1 is compulsory.

- 2. Out of remaining 5 questions, attempt any three questions.
- 3. Assume suitable data wherever required but justify the same.
- 4. All questions carry equal marks.
- 5. Answer to each new question to be started on a fresh page.
- 6. Figure to the right in brackets indicate full marks.
- 7. Use of statistical table is allowed.

1872 POUNT PO 19 19 PM 1. (a) Briefly explain the steps in simulation study. (5)

- (b) Compare random numbers and random variate; (5)
- (c) Explain data collection and analysis in input-modeling:-(5)
- (d) State queue notation, queue discipline and queue behavior:-(5)
- 2. (a) Discuss various costs that are involved in inventory system. Explain the policy and goal of inventory system:-(10)
  - (b) Consider the following sequence of 5 numbers

0.15, 0.94, 0.05, 0.51, 0.29

Use the kolmogorov - Śmirnov test to determine whether the Hypothesis of uniformity can be rejected. Given α=0.05 and the critical value of D=0.565 (10)

3. (a) What is time-series input model? Explain AR(1) and EAR(1) model:-

(b) Records pertaining to the monthly number of job-related injuries at an Underground coal mine were being studied by federal agency. The values for the past 100 months were as follows:

Injuries per month	0	1	2	3	4	5	6
Frequency of occurrence	35	40	13	6	4	1	1

Apply the chi-square test to these data to test the hypothesis that the underlying distribution is Poisson. Use the level of significance α=0.05

Turn Over

(10)

4. (a) A tool crib has exponential inter-arrival and service times and serves a very lar of mechanics. The mean time between arrivals is 4 minutes. It takes 3 min average for a tool-crib attendant to service a mechanic. The attendant is phour and the mechanic is paid \$15 per hour. Would it be advisable to hat tool-crib attendant?	nutes on the paid \$10 per
(b) What do you understand by model verification and validation? How would you Validate input-output transformation of a model?	(10)
5. (a) Give the equation for steady state parameters of M/G/1 queue and derive M/From M/G/1:-	/M/1 (10)
(b) Explain Inverse-Transform technique:-	(10)
(b) Explain Inverse-Transform technique:-  6. (a) Explain Manufacturing and Material handling system:-  (b) Explain Policibility System in details.	(10)
(b) Explain Reliability System in detail:-	(10)
